

DAILY DRILLING REPORT #34

SYNTHETIC DEMONSTRATION DOCUMENT - NOT REAL OPERATIONAL DATA (SIH PROTOTYPE)

WELL IDENTIFIER: NWIS-W011

FORMATION: Demo-Barail

EVENT TYPE: MUD_LOSS

OPERATIONAL DATE: 2024-01-20

MEASURED DEPTH: 3040.0 m

SEVERITY LEVEL: MEDIUM

DAILY OPERATIONS SUMMARY

Drilling 8-1/2 inch hole from 2990m to 3040m in Demo-Barail sandstone.
Observed moderate dynamic seepage loss of 20 bbls/hr at 3040m depth.
Loss rate correlates with depleted reservoir fault block communicated from offset well NWIS-W002.

TREATMENT & STABILIZATION

- 1. Added fine and medium ground walnut shells and mica flakes directly to active mud system.
- 2. Adjusted mud rheology: plastic viscosity (PV) 18 cP, yield point (YP) 22 lb/100ft2.
- 3. Seepage reduced to <3 bbls/hr within 45 minutes; continued drilling smoothly.
